

Dear customer,

“making a virtue out of necessity”- this is how our child “SoHeWa-hot water automat” was born. As we started the production of our first devices as an individual enterprise in 1967, our primary use were apartments in old buildings where there were no or, at least at a few spots, domestic hot water installations. Especially the housewife, back then as well as today, is in the need of constant hot water in short intervals and small amounts for her work.

In many years of research we developed a small, inconspicuous device, which is not bigger than a postcard. This device is very energy-saving, as SoHeWa only needs electricity when it is working for you.

Although enormous expansion and huge market advantages, as we are suppliers for the whole European area as well as for overseas, our company has remained a family business.

Therefore you are always in touch with the persons in charge as our customer’s support and satisfaction is very important to us.

This brochure should give you a short overview of SoHeWa’s possible field of applications. SoHeWa means “instantly hot water”. This device is internationally protected by the patent office.

Yours sincerely,  
family Bernhardt
